

CLIENT PRESENTATION V3

Sportive Rewards

A loyalty-first mobile app and Strategic500 client preview built for South Florida store traffic, brand drops, and first-party customer data.

STRATEGIC500.COM/SPORTIVE

The executive answer

Sportive does not need another generic discount program. It needs an owned loyalty layer that connects store visits, shoe sizes, brand preference, and the current online storefront.

OUTCOME 01

Retail value

More identified customers, better repeat-visit triggers, and measurable store attribution without relying only on broad markdowns.

OUTCOME 02

Brand value

Nike, On, adidas, New Balance, Jordan, Sprayground, and other lines become segmented campaign experiences.

OUTCOME 03

Data value

Sportive owns the fit profile, family profile, coupon wallet, purchase history, and redemption ledger.

Recommendation: launch the Strategic500 /sportive preview first, approve the UX and offer model, then build the app against the chosen POS/ecommerce architecture.

Sportive already has the right signals

The current website gives us a strong foundation for loyalty personalization: stores, sizes, brands, sale/new-arrival language, and Shopify-style cart behavior.

5

Store locations publicly listed

8+

Major brand collections visible

Size

Shop-by-size navigation is prominent

\$100+

Free-shipping threshold on site

NIKE

ADIDAS

ON RUNNING

NEW BALANCE

JORDAN

YEEZY

REEBOK

SPRAYGROUND

App opportunity

Turn website signals into owned push, wallet, store locator, QR redemption, and family fit profile.

Sales opportunity

Use Strategic500.com/sportive to show leadership the future state before committing to a full mobile build.

Sources used for findings: shopsportive.com homepage and Stores page, accessed Jun 27 2026.

A mall-driven South Florida footprint

Loyalty can localize campaigns by mall, inventory, customer location, and preferred store.

BEFORE LAUNCH

Clean the store master

Verify suite numbers, phone numbers, postal codes, hours, Google Place IDs, POS node IDs, and Shopify location IDs.

LOYALTY LEVER

Make campaigns local

Each offer can target a store, mall, or distance radius, then attribute redemption to the location.

STORE ACTIVATION

Location-triggered campaigns

Use mall and preferred-store data to target the right customers with store-specific drops, events, and offer wallet prompts.

OPERATIONAL CONTROL

Cashier-safe redemption

Every in-app offer should validate through the backend and be tied to store, campaign, customer, and POS transaction reference.

Store seed based on Sportive public Stores page. Confirm all location data against Google Business Profile and POS before production.

The loyalty strategy

Use rewards to capture customer identity, not just to issue discounts.

01

Identify

Phone/email capture at checkout and online, tied to rewards and receipt history.

02

Personalize

Save sizes, family members, preferred brands, and use cases like running, school, work, and lifestyle.

03

Activate

Push brand drops, mall events, replacement reminders, and app-only offers by segment.

04

Redeem

Use QR/barcode wallet with store/campaign attribution and POS-safe validation.

05

Retain

Trigger next-best offers after purchase, returns, birthday, inactivity, or size back-in-stock.

The app should feel like a Sportive insider pass: points, fit, local stores, and brand access - not just another coupon wallet.

Customer journey

A simple path from anonymous shopper to known repeat customer.

Why it matters

Every step improves first-party data and makes the next message more relevant.

Where POS matters

Redemption and purchase history must reconcile cleanly with Retail Pro Prism or Shopify POS.

Core app screens

Rewards, wallet, and profile provide the daily utility that keeps members coming back.

DESIGN PRINCIPLE

MVP utility

The app is useful even before full ecommerce because it remembers fit, rewards visits, and redeems in store.

REDEMPTION

POS-safe

Every coupon should validate server-side before redemption and reconcile to the transaction ledger.

Brand Hub: the marketing engine

The app turns brand demand into targeted campaigns by size, store, and purchase behavior.

CAMPAIGN TYPES

Nike / Jordan

Drop alerts, size holds, sneaker launch reminders

On / Cloud

Try-on bookings, comfort test, replacement reminders

adidas

Lifestyle bundles, back-to-school, Originals weekends

New Balance

Fit lab, width preferences, comfort shoppers

Sprayground

Backpack wall, school bundles, accessory attach

Reebok / Yeezy

Collection pages, sale triggers, last-pair alerts

Campaign rules live in the admin portal. The app should not hard-code brand offers, terms, store eligibility, or approval status.

Branded marketing mockups: Nike and On / Cloud

Two high-value campaign examples: sneaker demand and comfort-fit conversion.

CLIENT-FACING STORY

Why these pages matter

They give Sportive a way to talk to different customer motivations without broad discounting: access for sneaker shoppers, fit confidence for comfort/running shoppers.

IMPLEMENTATION

Marketing mechanics

Each campaign can be tied to a push notification, in-app page, QR code, store event, and redemption record.

BRAND APPROVALS

Compliance guardrail

Use brand names as planning labels until Sportive receives written approval for official marks, imagery, copy, and offers.

Brand campaign mockups

adidas, New Balance, Jordan, and Sprayground each get reusable, admin-controlled pages.

Reusable campaign template

Brand, audience, stores, CTA, terms, approval status, and redemption logic become admin-controlled data.

Loyalty model: rewards without margin leakage

Use tiers, access, and fit services before relying on broad discounts.

STAR

Join + identify

Base points, receipt history,
birthday month

PRO

Repeat customer

Early alerts, fit profile, family
offers

MVP

High-value loyalist

Event access, bonus days, app-
only rewards

ICON

Top spend / advocate

Personal invites, launch
priority, concierge holds

- Start simple: 1 point per \$1 or equivalent POS-safe rule.
- Reward non-discount actions: event check-in, profile completion, referrals, reviews.
- Track redemption liability and expiration before launch.
- Use bonus multipliers for brand events only when margins allow.

SYSTEM RULE

Admin control

Tier thresholds, expirations, and excluded products should be editable without app release.

Manufacturer and brand participation plan

Sportive should use the app to unlock brand support, but the customer promise must remain Sportive-owned until formal approvals exist.

BRAND REPS

Ask for co-op support

Request approved assets, launch calendars, event kits, merchandising funds, and brand rep participation for local store events.

COMPLIANCE

Use approved language

Separate Sportive Rewards from manufacturer-owned loyalty programs unless the brand approves a specific connection.

VENDOR VALUE

Measure sell-through

Share anonymized campaign performance by store, segment, and redemption to strengthen vendor relationships.

Important: Adidas states adiClub points are currently earned on adidas products/services purchased through adidas channels, not partner purchases. Sportive should not promise adiClub earning unless adidas approves it.

POS and commerce strategy

There are three viable paths. The right choice depends on the physical-store POS direction.

PATH A

Retail Pro Prism upgrade

Best if Sportive keeps Retail Pro operations and wants strong physical-store inventory, receiving, transfers, and POS workflows.

PATH B

Shopify + Retail Pro bridge

Use Shopify for ecommerce and Prism/Retail Pro for store operations. The app backend reconciles customers, offers, and receipts.

PATH C

Shopify POS migration

Best if Sportive wants one Shopify-centered platform for web, POS, inventory, customer profiles, and app ecosystem.

Recommended discovery: confirm current POS version, store sync model, customer data cleanliness, coupon workflow, and all-in cost before committing to migration.

Strategic500.com/sportive

Build a client-facing preview hub before the production app.

PREVIEW HUB

Purpose

A polished approval site that lets Sportive review the app direction without installing anything.

CLIENT PACKAGE

Downloads

PowerPoint, PDF, interactive mockup, store seed, and Codex handoff live in one place.

BUILD ORDER

Next step

Codex starts with the /sportive route, then app/backend work after approval.

Architecture: secure backend first

The app never talks directly to POS terminals, store databases, or Shopify Admin APIs.

Data model: the customer graph

The core product is the relationship between a member, their fit profile, their purchases, their offers, and their stores.

CORE ENTITY

Customer

phone, email, consent, preferred store

Fit Profile

sizes, width, family members, use cases

Campaign

brand, audience, stores, terms, assets

Offer Wallet

coupon, barcode, expiration, liability

Purchase Ledger

transactions, items, sizes, returns

Redemption

customer, store, cashier, campaign, POS reference

The reward ledger must be append-only: every earn, adjustment, expiration, and redemption should leave an audit trail.

iOS and Android build plan

Build one cross-platform mobile app with native push, wallet, and store functionality.

APP STACK

Mobile framework

React Native with Expo/EAS keeps iOS and Android aligned while still allowing native push and app-store release workflows.

API STACK

Backend

Node/NestJS or FastAPI with Postgres, Redis queue, and connector adapters for Shopify and the selected POS.

OPS STACK

Admin portal

Next.js admin for campaigns, customer lookup, brand calendar, and sync health.

QA STACK

Releases

TestFlight and Google Play internal testing before full App Store / Play Store launch.

- Prototype first as clickable Figma/HTML and Strategic500 preview.
- Integrate auth, stores, wallet, and campaigns before purchase history.
- Pilot one or two stores before all-location rollout.
- Train cashiers on QR/barcode workflow before public launch.

Implementation roadmap

A phased path from approval to South Florida rollout.

The first production milestone should be the Strategic500 /sportive route because it creates a reviewable asset and Codex starting point immediately.

Pilot scorecard

Define success before launch so Sportive can judge the pilot on business outcomes, not app downloads alone.

METRIC

Member capture

% of associations with identified customer
Target: >50-55 pct

Repeat visit

Members returning within 60 days
Target: lift vs baseline

Redemption quality

Offer redemptions tied to margin rules
Target: profitable redemptions

Brand campaign lift

Sell-through by brand/size/store
Target: campaign vs control

Data quality

Duplicate customer and sync error rate
Target: <2% exceptions

Staff adoption

Cashier scans / manual overrides
Target: scan-first workflow

Pilot recommendation

Run the pilot with one high-volume mall store and one lifestyle/fit-driven store to test both sneaker demand and comfort/running campaigns.

Approval gates and risk controls

The proposal is build-ready, but these decisions prevent rework and protect margin, data, and brand relationships.

Store data

Canonical addresses, hours, phone numbers, Google Place IDs, POS node IDs.

Brand approvals

Manufacturer assets, co-op funds, MAP rules, and official campaign language.

POS decision

Retail Pro Prism upgrade, Shopify POS migration, or bridge.

Offer economics

Points liability, expiration, exclusions, discount thresholds.

Cashier workflow

QR scan, barcode scan, manual code, or POS-native coupon.

Privacy / consent

SMS, push, email consent, policy updates, and data retention.

Do not launch public brand campaigns using manufacturer marks or official-sounding copy until Sportive has written approval.

Codex handoff: build order

The package now has a clear first PR and production path.

IMMEDIATE

PR 1: /sportive route

Add Strategic500 client preview page, assets, downloads, mockup sections, and brand-compliance disclaimer.

AFTER APPROVAL

PR 2: schema + admin shell

Add stores, campaigns, customers, offers, ledger, redemptions, sync health, and approvals metadata.

BUILD

PR 3: mobile MVP

Build Expo app screens for onboarding, rewards, brand hub, wallet, stores, and fit profile.

INTEGRATE

PR 4: connectors

Shopify plus Retail Pro Prism or Shopify POS adapter based on final decision.

PILOT

PR 5: pilot tools

QR validation, cashier instructions, reporting, test users, and store training material.

LAUNCH

PR 6: launch hardening

Security, analytics, privacy, push certs, app store assets, and operations runbook.

DECISION SLIDE

Approve the preview route. Then build the MVP.

The updated package includes the client presentation, interactive app mockup, branded campaign examples, store seed file, high-res logo, and Codex handoff for Strategic500.com/sportive.
